

Woochan (Andy) Jung

📞 778-689-0524 | ✉️ waj4@sfu.ca | 🔗 LinkedIn | 🐙 Github | 🌐 Personal Website

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript, TypeScript, Java, Go, Kotlin

Frameworks/Technology: React, Node.js, NextJS, Flask, Tailwind CSS, PostgreSQL, AWS, IIS

Libraries: Pandas, BeautifulSoup4, OpenCV, Mediapipe, PyTorch, XGBoost, Numpy, scikit-learn, TensorFlow

EDUCATION

Simon Fraser University

Bachelor of Science in Computer Science

Expected Graduation: June 2027

Burnaby, BC

EXPERIENCE

Harris Computers

Oct 2025 – Present

AI Software Engineer, Co-op

Remote

- Scaled **Matcha**, an internal LLM-powered copilot, used by **13k+** employees across **200+** subsidiaries
- Shipped full-stack features in **React** and **PostgreSQL** and integrated LLM workflows using **LangChain**
- Worked on **RAG pipelines** integrating vector search and enterprise data to power domain-specific chats and copilots
- Designed **LLM orchestration** with prompt routing, memory systems, and multi-model pipelines
- Delivered production features such as NanoBanana integration and LLM-driven PowerPoint generation workflows
- Contributed in a fast-moving lean team, shipping weekly releases with rapid bug fixes and new feature updates

OSI Maritime Systems

Jan 2025 – Aug 2025

Software Engineer, Co-op

Vancouver, BC

- Built **SmartData.ai**, an internal AI data-anomaly detection tool using **Flask**, **React**, **SQLite3**, deployed on **IIS**
- Automated Vessel Sensor Data QA checks, reducing validation time by **50%** and supporting **40+** system engineers
- Developed the multivariate **XGBoost** model powering SmartData to run data anomaly detection in **Python**
- Ingested and transformed vessel system Excel sheets using **Pandas** and **scikit-learn** for clean training and inference
- Improved accuracy through data cleaning, feature engineering, and class rebalancing using **random oversampling**

SFU Robot Soccer

Sep 2025 – Present

Reinforcement Learning Engineer

Burnaby, BC

- Trained **multi-agent RL** agents using **PyTorch** and **Stable-Baselines3** to improve autonomous robot soccer games
- Created custom simulation environments with **MuJoCo** and **C++** to support team-based RL training
- Applied RL techniques such as **reward shaping**, **curriculum learning**, and **self-play** to enhance agent's gameplay

PROJECTS

SpeakFast | Flask, AWS, Google Cloud Speech, Gemini API, MongoDB

Sep 2025 – Present

- Built an AI language-learning app with spontaneous call simulations powered by **Google STT** and **ElevenLabs**
- Built **Gemini LLM agents** for scenario-based conversation and personalized tutoring using transcript analysis
- Built a cross-platform mobile app using **React Native** and **Expo**, in development for iOS/Android launch
- Voted “**Most Likely to Become a Startup**” at StormHacks 2025

SydeKick AI | Python, PyTorch, OpenCV, MediaPipe

Jan 2025 – Apr 2025

- Developed an MMA striking and grappling detection system using **Python**, **OpenCV**, and pose-estimation pipelines
- Used **MediaPipe** pose-tracking to follow fighter movement and compile strike sequences for classification
- Trained custom **PyTorch CNNs** to classify punches, kicks, and grappling with real-time responsiveness

City Escape | Java, Apache Maven, Javadoc

Sep 2024 – Dec 2024

- Implemented an **A* pathfinding cop agent** in Java for autonomous pursuit behavior, for a 2D Java game
- Applied **OOP principles** to create a modular Java design with separated character, map, and rendering modules
- Produced full project documentation using **Javadoc** to describe class design and system architecture

AWARDS

Google DSC Hackathon Winner | Awarded top project for **GradGains**, financial web-app for students

1st Place, OSI Business Innovation Hackathon | Awarded for EchoNote, **60k annual** potential savings

B.C. Achievement Scholarship | Awarded to **8000** graduates with the top academic achievements
