TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C, C++, HTML, CSS, Java

Frameworks/Technology: React, Node.js, NextJS, PyTorch, Flask, Tailwind CSS, SQLite, Rest API, AWS

Libraries: Pandas, BeautifulSoup4, OpenCV, Mediapipe, PyTorch, XGBoost, Numpy

EDUCATION

Simon Fraser University

Bachelor of Science in Computer Science

Sep 2023 – Present

Burnaby, BC

EXPERIENCE

OSI Maritime Systems

Software Engineer Intern

Jan 2025 – Aug 2025

Vancouver, BC

- Designed and developed **SmartData.ai**, a full-stack application (**Flask, React, Tauri**) serving as an **AI-powered error detection system** for system integration logs, reducing manual validation effort and operational costs by **40%**.
- Built a custom **multivariate XGBoost classifier** for the error detection; improved performance through data cleaning, feature engineering, and class re-balancing with random oversampling.
- Engineered a **SQLite3**-backed logging and persistence layer to store historical and user-submitted data, enabling reproducibility, incremental retraining, and continuous learning of the classifier.

SFU Robot Soccer

Software Developer

Sep 2024 – Dec 2024

Burnaby, BC

- Designed field mapping and route optimization algorithms using **A* pathfinding** for robot navigation
- Enhanced software by developing new AI-driven agents using **C++** and **Python**
- Virtually tested and optimized robot behavior using graphical simulations using **QT**

PROJECTS

EchoNote | Prompt Engineering, Flask, React, Ollama

May 2025 – Jul 2025

- Lead building a **local AI meeting summarizer** with **Flask + React**, running lightweight **Mistral 7b via Ollama** for secure offline inference.
- Standardized output in JSON schemas consumable by analytics pipelines, enabling integration with dashboards for real-time visibility.
- Filters side chatter and outputs concise, timestamped summaries with key action items and decisions

ClearMyFridge | Flask, PostgreSQL, Fine-Tuning

Jan 2025 – Mar 2025

- Fine-tuned two **Gemini 1.5 flash** models using curated datasets and prompt engineering for accurate recipe generation and ingredient rejection
- Integrated the models via **Flask-powered REST API** for real-time usage through the mobile app using **Unity**
- Implemented a **PostgreSQL** database to store user dietary restrictions and preferences, which were used to personalize recipe recommendations through continued textmodel fine-tuning as users interacted with the app

Grad Gains | NextJS, Typescript, React, Tailwind CSS, Git, NeonDB

Jan 2024 – Aug 2024

- Built a finance web-app to help students invest through community-building features using **NextJS**
- Implemented a **REST API** for real-time financial data and a dynamic dashboard

Fit Pals | Python, OpenCV, Mediapipe, Flask, SQL

Mar 2024 – May 2024

- Developed a fitness tracking web application that provides users with feedback on exercise form and posture using **OpenCV** and **Mediapipe**
- Built a push-up and squat repetition counter with real-time **Python**-powered TTS feedback to improve user form
- Implemented a web interface with **Flask** for users to track their progress and interact with feedback data

AWARDS

Google DSC Hackathon Winner | Awarded top project for **GradGains**

1st Place, OSI Business Innovation Hackathon | Awarded for Echonote, **60k annual** potential savings

B.C. Achievement Scholarship | Awarded to **8000** graduates with the top academic achievements
